Reasoning by Deduction.

A young English lady who was going out to New Zealand to get married went to a dressmaker for her trousseau. The dressmaker suggested a warm material. The young lady asked why, saying that the climate of New Zealand is a beautifully mild one. The dressmaker replied: "I assure you, madam, you are mistaken, for that is where the frozen meat comes from."

Airship Trolley Car.

It is quite a new idea to drive a suspended trolley car by means of a propeller like an airship. The car, with which experiments are being made at Burdan, Cal., runs on a short length of overhead track of about a quarter of a mile, and is driven by a twenty-six horsepower gas engine. The car is made of steel and aluminum, and is intended to have a light flexible covering, with celluloid windows. It is 50 feet long, and can carry 30 passengers. It has worked quite satisfactorily, though the track is too short to test its speed. The propeller has two blades, like huge fans, made of sheet metal on arms of steel tubing. Another propeller will be fixed in front, which will double the motive power and prevent stoppage in case of a breakdown to the rear propeller.
